CEROTEK

Assistance Call System

compliant with the regulation
VDE_0834

The ASSISTANCE CALL SYSTEM requires the installation of repeaters that cover a wide range of action and allow the correct functioning of HEADBORAD, BATHROOM ALARM and LIGHT ALARM.

It's a wireless system that doesn't need any modification to the electrical system.

When the ASSISTANCE CALL SYSTEM is activated through the HEADBOARD or the BATHROOM ALARM, outside the room the LIGHT ALARM will activate (both visually and sonically) with GREEN FLASHING LIGHT to indicate the room of the guest who requested assistance and with RED FLASHING LIGHT to signal the request of medical intervention.

At the same time, the ASSISTANCE CALL will appear on the given App with the ROOM, the NAME of the person who requested assistance and the TIME PASSED since the activation of the call.

The calls are available on the displays and the smart tvs in the hallways or in the common areas. To close the intervention the operator will have to push the EMERGENCY button to signal a critical situation, or the CANCEL button to signal the resolve of the problem. Everything is being registered, stored and it's possible to extract the data.

Through CentroStella, is possible to record, store and extract all the data detected, accessing to the history of the operations.
